SAUTER modulo 5 communication modules

SAUTER communication modules enable third-party systems to be integrated on the automation level. Field-bus protocols, based on EIA-232 or EIA-485, such as Modbus/RTU and M-Bus, can be integrated directly on the automation station. The data is mapped in BACnet objects and is visible on the BACnet/IP network.

The devices of the moduNet series enable the SAUTER novaNet bus system to be integrated into parent IT networks. A direct Ethernet interface and BACnet gateway functionality are provided for this purpose.

SAUTER modulo 5 room automation stations

The areas of use for the SAUTER ecos 5 room automation stations range from precise room control with heating and cooling to integrated room automation with demand-based ventilation, lighting and sunshading. The scalable solutions for controlling and regulating the rooms are individually adjusted to the required functional scope and the usage profile. You thus reduce your energy consumption, your costs and CO₂ emissions while providing maximum comfort and well-being. The ecos 5 enables the floor space to be adjusted flexibly during operation by dividing the area on each floor into room segments.

SAUTER modulo 5 remote I/O modules

The SAUTER ecolink modules are remote modules for flexibly expanding the I/O mix of the ecos500/504/505 room automation stations. The modules are used to capture digital and analogue signals from sensors and HVAC installations. They control valve actuators, dampers, fans, dimmable lamps or sunshade actuators. The remote fitting reduces the wiring needed for the sensors and actuators.
